SUMMARY

Full-Stack Product Engineer specializing in **payment systems, realtime collaboration, and zero-knowledge security**. Shipped **8 production-grade products across 32 repositories**, including a zero-knowledge vault and a LiveKit-powered CRM now in production, as measured by successful deployments to Cloudflare Pages and PM2. Expert in **TypeScript, Go, Rust, and Laravel**; proven open-source contributor to CNCF and 1k+ star projects.

TECHNICAL SKILLS

Frontend: TypeScript, JavaScript, React 19, Next.js 16, Tailwind CSS, Vite

Backend: Node.js, Express 5, NestJS 11, FastAPI, Laravel 13 (PHP 8.4), Go 1.25, Rust (Tauri 2)

Data & Infra: PostgreSQL, MySQL, SQLite, Redis, Prisma 7, Docker, Nginx, Cloudflare (Pages/Workers/D1), Socket.io, LiveKit

Payments & Email: Stripe Connect, SCA/3DS, PayPal, SMTP, DKIM/SPF, Postal

PROJECTS

AHS Vault — Zero-Knowledge Biometric Vault Go, Rust/Tauri, React PWA, Kotlin | github.com/britsync07-prog/brit-os

Go 1.25, Rust/Tauri 2, React PWA, PostgreSQL, MinIO

- Engineered zero-knowledge storage handling **AES-256-GCM chunked encryption**, as measured by successful multi-device unlock, by implementing X25519/Ed25519 key exchange and signed minisign auto-updates in Rust/Tauri.
- Reduced updater failure rate to zero, as measured by pinned-pubkey trust chain, by fixing Tauri v2 artifact misclassification and serde backward-compatibility drift.

BritCRM — Self-Hosted All-in-One CRM (Production) Next.js 16, Socket.io, Prisma, LiveKit | github.com/britsync07-prog/crm

Next.js 16, Socket.io, Prisma 7, LiveKit, Stripe — Live in production

- Architected single-process PM2 host orchestrating **Socket.io workers + LiveKit SFU + 55-model Prisma schema**, as measured by stable production deployment, by unifying JWT, origin allowlisting, and per-user MCP bearer tokens.
- Improved meeting reliability for camera-less users, as measured by successful join without hardware, by decoupling device publishing from join and hardening MediaPipe virtual-background pipeline.

BlackDesck — Consultation Platform Laravel 13, Inertia 3, Stripe, PayPal | github.com/britsync07-prog/stripepay

Laravel 13, Inertia 3, React 19, Stripe Connect, PayPal

- Increased checkout conversion, as measured by reduced 3DS friction, by migrating from forced 3DS to Stripe *automatic* risk-based SCA while preserving session-fingerprint tests.
- Eliminated double-charge incidents, as measured by 60+ PHPUnit tests passing, by making payment recording idempotent across webhook and browser-return paths.

BritTrade AI — Crypto Signal Engine Node.js, CCXT, Capacitor/Kotlin | github.com/britsync07-prog/britTrade

Node.js, CCXT, Capacitor/Kotlin, Binance Futures

- Automated Binance futures execution with **paper/live parity**, as measured by zero ghost orders in production, by propagating signal_id and auto-cancelling stale limits with IPv4 keep-alive.
- Prevented capital over-allocation, as measured by atomic balance checks, by fixing a race condition in the DCA pipeline and encrypting exchange keys with AES-256.

BritTube — AI Video Generation Platform FastAPI, MoviePy, Next.js 16, MCP | github.com/britsync07-prog/BritTube

FastAPI, MoviePy, Next.js 16, MCP, SQLAlchemy

- Built automated pipeline from script to footage to TTS to MP4, as measured by successful public API + MCP server integration, by orchestrating Redis queues and APScheduler cleanup.
- Reduced streaming failures, as measured by absolute URL handling and bitrate optimization, by hardening VideoGenerator fallbacks and aligning JWT validation.

WinyPay Client — Gaming Platform Next.js 15, Express 5, Prisma | github.com/britsync07-prog/bdclient011

Next.js 15, Express 5, Prisma 5, SQLite

- Integrated seamless-wallet game provider (OroPlay), as measured by 100% doc-strict callback handling, by fixing crash on cancelled bets and adding balance-gte atomic withdrawal guards.

BritOS 7 — Portfolio Operating System Vanilla JS, HTML/CSS | brit-os.pages.dev | github.com/britsync07-prog/brit-os

Vanilla JavaScript, No Frameworks — Deployed on Cloudflare Pages

- Launched interactive OS portfolio (BIOS boot, draggable windows, working terminal, calculator, calendar) as measured by zero external dependencies and offline capability.

OPEN SOURCE CONTRIBUTIONS

- argoproj/argo-cd #29402** (23,999 stars, CNCF) — Fixed false Degraded on GrafanaFolder health check for grafana-operator v5.25.0 [PR]
- datacontract/datacontract-cli #1543** (1,047 stars) — Fixed ODCS export missing required status field [PR]
- perses/shared #257** (CNCF Sandbox) — Fixed panel header customAllValue display [PR] | **fossasia/eventyay-exhibition #180** (1,529 stars) — Normalized form button sizing [PR]

EDUCATION

H.S.C. — Science Shaikh Burhanuddin Post Graduate College, Dhaka | **02/2022 — 10/2024**

S.S.C. — Science Armanitola Government High School, Dhaka | **01/2020 — 12/2021**
